Apply for the job: Freelancer Frontend Dev

## Brief introduction

Hello! My name is Nguyen Huu Tai, I am 23 years old.

Hello! My name is Nguyễn Hữu Tài, I am 23 years old. I have started to know about information technology since 09/2021. In the learning process, I began to know about web development and I have learned about it for about 8 - 9 months. From April 2023 to March 2024, I am developer at Unikcore as Front-end developer. From May 2024 to now, I am developer at Smartway as Front-end developer.

## Skills

### Programming Languages

Javascript, TypeScript.

### Web Front-end Technologies

ReactJS, NextJS, Redux(Redux-Toolkit), TailwindCss, Sass, Axios, Antd, BootStrap , Marterial UI, Tanstack Query, ShadCN.

## Dev Tools

Git, Postman, React Developer Tool, Redux Dev Tool, React Query Dev Tool, Github, Gitlab, Figma, VS Code.

## English

Reading, Speaking and Listening at medium

## Experience

Front-end Developer at UnikCore Company (Full-time). From April 2023 to March 2024. Front-end Developer at Smartway Company (Full-time). From May 2024 to now.

## Projects

### 1. Unikcore Project

This is the first real-world project I have ever worked on. It is a product created to manage sales, marketing, and customer care systems for various industries.

**Team size:** 3

**Technologies used:** NextJS, Redux (Redux-toolkit), Tanstack Query, Formik, Yup, Axios, React-Beautiful-DnD, Antd, Sass, React ChartJS.

**Functions include:**

Create components for reusing in whole project.

Handling login/logout and maintain login with access token, refresh token.

Create some pages that show data with table and handle logic for those pages.

Create a page that called segment builder. This page is used to filter out customer segments based on the fields that the admin has filtered out.

Create contact information detail. This page is used to display the complete information of a customer through their contact information and shopping details.

Create some pages that handle form and validate information.

From October 2023 to March 2024, restructure the pages that were not performing well before and add some new features to the app.

### 2. Warehouse Management System Project

**Team size:** 3

This is the first project at Smartway. This project is a warehouse management project designed to support businesses in their warehouse management operations. Specifically, this solution helps businesses track and control goods in and out of the warehouse, inventory, and transportation to support sales and supplier ordering activities. **Technologies used:** NextJS, MUI, React ChartJS, React Hook Form.

**Functions include:**

Create components for reusing in whole project.

Create dashboard page for statistical data.

Display data in a table format and filter data based on the user's search results.

Create reports page for checking data.

Handle form when user send data to server.

Access control based on the logged-in account.

Update and modify features based on customer needs.

Work with the design team based on Figma to create the best website for the project.

### 3. Smartway Homepage Project

**Team size:** 1

This is my second project at Smartway. This project is a website that provides an overview of the company. Since this is a company overview project, there aren't many user features. The two main priorities are ensuring the design strictly follows the Figma file and optimizing SEO. **Technologies used:** NextJS, MUI, TailwindCSS.

**Functions include:**

Initialize and set up the project to ensure that SEO-related content is optimized for the best possible SEO performance. Create dashboard page for statistical data.

Work with the design team based on Figma to create the best website for the project. Create reports page for checking data.

### 4. eMover Project

**Team size:** 1

This project was developed concurrently with the Smartway homepage. However, this project is designed to help users find the right carrier for their orders. In this project, I took the main role in front-end development. **Technologies used:** NextJS, MUI, TailwindCSS, React Hook Form.

**Functions include:**

Initialize and set up the project to ensure that SEO-related content is optimized for the best possible SEO performance.

Work with the design team based on Figma to create the best website for the project.

Create a form for users to input information to search for shipping companies, allowing them to filter results based on pricing, ratings, delivery dates, etc. Create another form for users to enter detailed information and proceed with order creation.

Create an account management section where users can check their order information or edit their personal details.

🙏 Thanks!

Looking forward to hearing from you - Nguyen Huu Tai
